

Chemical Storage Tanks

Features

- Compact design to minimise footprint requirements.
- Manufactured using high quality UV-stabilised food grade polyethylene.
- Available in 60, 100 and 200 litre capacities
- Bunded tanks available to suit most size tanks
- Graduations moulded into tank body
- Tank drain port connection
- Large, easy access screw cap
- Tank top ideally suited for direct mounting of chemical dosing pumps, reinforcing plate available to order
- Easy to install or move with recessed handles

The ST series polyethylene storage tanks are used as part of a complete dosing system and provide a stable base for mounting the dosing pump and chemical level sensor in a single, compact unit. Tanks are fitted with a drain valve to simplify periodic cleaning and chemical formulation changes. The large recessed screw cap allows easy access for addition of fresh chemical and diluents.

All wetted surfaces are UV stabilised, dye free, heavy metal free polyethylene and are ideal for the storage of most chemical solutions.

Tank with reinforced mounting plate for pump and mixer

Pump and Mixer mounted to reinforced plate and tank
